<b>Science Plan/Program/Project:</b>	Norwegian Polar Institute as national coordinator for Norwegian Antarctic activities		
<b>Planned Operating Period:</b>	From	To	
	<b>Organisation:</b>		

<b>Contact Point:</b>	<b>Name:</b>	Jan-Gunnar Winther
	<b>Job Title or Position:</b>	Director, Norwegian Polar Institute
	<b>Phone:</b>	+47 77 75 05 00
	<b>Email:</b>	winther@npolar.no
<b>Details/Description:</b>	Norway maintains its long-term commitment of scientific research in Antarctica. The Norwegian Polar Institute as the national coordinator enables Norway to maintain this role from its research and long-term monitoring and survey activities. In addition to NPI, the Norwegian Air Research Institute (NILU) undertakes long-term survey and remote sensing activities in Antarctica. NPI provides the main infrastructure for polar research, maintains the permanent Norwegian presence in Antarctica, and supports international objectives through collaborative scientific and logistic links with many other national programs. As an important contribution for long-term scientific activities is permanently occupied research station Troll.

<b>Details/Description:</b>	<p>The Policy for Norwegian polar research 2014–17 was prepared by the Norwegian National Committee on Polar Research for the Research Council of Norway. This is the second time the Research Council has drawn up a document that covers research both in the Arctic, including Svalbard, and in the Antarctic. The policy document has been formulated based on key challenges and opportunities for Norwegian polar research, new trends in the Polar Regions and Norway's overall interests in this context. In 2014 The Research Council published the report "Policy for Norwegian polar research 2014-2023" which recommends an increase in Norwegian research activity in the Antarctic.</p>

## Scientific Information - Science Activities in Previous Year

<b>Project Name/Number:</b>	<b>Response of Antarctic seabirds</b>
<b>Discipline:</b>	Biology
<b>Principal Investigator:</b>	Sebasti��n Descamps (NPI)
<b>Main Activity/ Remarks:</b>	Changes in sea-ice dynamics are expected to mediate changes in krill abundance and distribution, and influence the entire Antarctic ecosystem. To elucidate the consequences of changes in sea-ice dynamics on top predators such as seabirds is challenging. However, recent technological advances to monitor animal spatial dynamics (e.g., miniaturized global positioning systems), diet (e.g., analyses of stable isotopic ratios) and environmental conditions (e.g., remote sensing of sea-ice cover) now offer the potential to address such questions. The IceBird project (2011-2014) aims to combine detailed individual monitoring of Antarctic petrels spatial dynamics, diet and demography using cutting edge technology and modeling to assess and predict how this seabird responds to changes in sea-ice dynamics. The research is taking place at the Svarthamaren Antarctic petrel colony, which is the largest known inland seabird colony on the Antarctic; this colony constitutes a large portion of the global population of Antarctic petrels. This project will improve our understanding of the functional processes of the Southern Ocean ecosystem and of the impact of climatic changes on Antarctic seabirds.

<b>Project Name/Number:</b>	<b>A permanent, broadband, seismic station at the Troll research base: installation, data analysis and interpretation</b>
<b>Discipline:</b>	Seismology
<b>Principal Investigator:</b>	Johannes Schweitzer (NORSAR)
<b>Main Activity/ Remarks:</b>	The permanent broadband seismic station at Troll was established and put into operation in early 2012. all data are transferred in real time via a satellite link to NORSAR for analysis and further distributed to the European data center ORFEUS, where they can be accessed by the whole seismological community.

<b>Project Name/Number:</b>	<b>Atmospheric research and monitoring at Troll: a long-term observational program.</b>
<b>Discipline:</b>	Atmospheric chemistry
<b>Principal Investigator:</b>	Norwegian Institute for Air Research
<b>Main Activity/ Remarks:</b>	The Troll Atmospheric Station in Antarctica was established and put into operation in early 2007. The main foci of the measurement programme are pollution and aerosols in the transition zone between the coastal zone and the inland ice plateau, complementing existing observation programmes along the Antarctic coast and on the Antarctic Plateau.
